Subject: FW: quick question on residue management for tdus

Mike,

Also, just to follow-up, I did see char manifests (these were sent to IDEM). All listings carry through, including U-codes. Some of the char loads are characteristic (TCLP) for metals (e.g., cadmium, chromium, lead).

Char is sent to US Ecology in Belleville, MI.

Michael

Subject: RE: quick question on residue management for tdus

Hi Mike, for the Chem Waste in OR the listed waste codes carry through. For example K-50 waste enters the TDU and when solids come out the material still carries the K-50 code. The solids that come out of the TDU are sent to landfill after they meet LDRs.

Subject: quick question on residue management for tdus

Do you folks know offhand how residues from tdus at tdx, cwm(s), tradebe are managed? I seem to recall metal from shredded drums are separated and scrap recycled. I'm trying to remember how the char is handled – I assume either landfilled or blended into haz waste derived fuel. Specific question is whether listed waste codes carry thru to the char.

I'm sure I have this info somewhere, but I haven't focused on residue management yet. No biggie if you don't know offhand – I'm just trying to predict question that may come up today at the dd meeting.
